Botox Injections for your Feet

What can they treat?

They can be used in the treatment of excessivly sweaty smelly feet, also known as "hyperhidrosis". Botulinum toxin is approved to treat the symptoms of severe sweating when topical medicines do not work well enough.

How does it Work?

Botulinum toxin is injected into the affected areas to help control this condition by temporarily blocking the chemical signals from the nerves that stimulate the sweat glands. When the sweat glands do not receive chemical signals, the severe sweating settles.
